MEMBUAT RAK, KATEGORI, DAN BUKU

Silahkan Tambahkan Pada Controller Admin Untuk Function dari Rak

Controller Admin - Rak

```
public function master_rak()
{
    $modelRak = new M_Rak();

    // langsung hasil array dari findAll()
    $dataRak = $modelRak->getDataRak([
        'is_delete_rak' => '0'
    ]);

    $uri = service('uri');
    $page = $uri->getSegment(2);

    $data = [
        'page'      => $page,
        'web_title' => 'Master Data Rak',
        'data_rak'  => $dataRak
    ];

    echo view('Backend/Template/header', $data);
    echo view('Backend/Template/sidebar', $data);
    echo view('Backend/MasterRak/master-data-rak', $data);
    echo view('Backend/Template/footer', $data);
}

public function input_rak()
{
    $data = [
        'web_title' => 'Input Data Rak'
    ];

    echo view('Backend/Template/header', $data);
    echo view('Backend/Template/sidebar', $data);
    echo view('Backend/MasterRak/input-data-rak', $data);
    echo view('Backend/Template/footer', $data);
}

public function simpan_rak()
{
    $modelRak = new M_Rak();

    $namaRak = $this->request->getPost('nama_rak');
```

```

// ambil ID terakhir
$last = $this->db->table('tbl_rak')
    ->select('id_rak')
    ->orderBy('id_rak', 'DESC')
    ->limit(1)
    ->get()
    ->getRowArray();

if (!$last) {
    $id = 1;
} else {
    $id = $last['id_rak'] + 1;
}

$data = [
    'id_rak' => $id,
    'nama_rak' => $namaRak,
    'is_delete_rak' => '0',
    'created_at' => date('Y-m-d H:i:s'),
    'updated_at' => date('Y-m-d H:i:s'),
];

$modelRak->insert($data);

session()->setFlashdata('success', 'Data Rak berhasil disimpan!');
return redirect()->to('/admin/master-data-rak');
}

public function edit_rak($id)
{
    $modelRak = new M_Rak();

    $dataRak = $modelRak
        ->where('id_rak', $id)
        ->first();

    $data = [
        'data_rak' => $dataRak
    ];

    echo view('Backend/Template/header', $data);
    echo view('Backend/Template/sidebar', $data);
    echo view('Backend/MasterRak/edit-data-rak', $data);
    echo view('Backend/Template/footer', $data);
}

public function update_rak()

```

```

{
    $modelRak = new M_Rak();

    $id = $this->request->getPost('id_rak');

    $data = [
        'nama_rak' => $this->request->getPost('nama_rak'),
        'updated_at' => date('Y-m-d H:i:s')
    ];

    $modelRak->update($id, $data);

    session()->setFlashdata('success', 'Data Rak berhasil diupdate!');
    return redirect()->to('/admin/master-data-rak');
}

public function hapus_rak($id)
{
    $modelRak = new M_Rak();

    // cek data rak ada atau tidak
    $data = $modelRak->where('id_rak', $id)->first();

    if (!$data) {
        session()->setFlashdata('error', 'Data tidak ditemukan!');
        return redirect()->to('/admin/master-data-rak');
    }

    // Cek Apakah Rak dipakai
    $cek = $this->db->table('tbl_buku')
        ->where('id_rak', $id)
        ->where('is_delete_buku', '0')
        ->countAllResults();

    if ($cek > 0) {
        session()->setFlashdata('error', 'Rak sedang digunakan oleh buku!');
        return redirect()->back();
    }

    // Proses Hapus
    $modelRak->delete($id);

    session()->setFlashdata('success', 'Data rak berhasil dihapus permanen!');
    return redirect()->to('/admin/master-data-rak');
}

```

Buat di Models dengan nama file M_Rak.php

Model Rak

```
<?php

namespace App\Models;

use CodeIgniter\Model;

class M_Rak extends Model
{
    protected $table = 'tbl_rak';
    protected $primaryKey = 'id_rak';
    protected $allowedFields = [
        'id_rak',
        'nama_rak',
        'is_delete_rak',
        'created_at',
        'updated_at'
    ];

    // Ambil Data
    public function getDataRak($where = false)
    {
        if ($where) {
            return $this->where($where)->findAll();
        }

        return $this->findAll();
    }
}
```

Lalu dalam viewsnya buat folder MasterRak, nanti di dalamnya ada beberapa file diantaranya master-data-rak.php, input-data-rak.php, dan edit-data-rak.php.

Views MasterRak

master-data-rak.php

```
<div class="col-sm-9 col-sm-offset-3 col-lg-10 col-lg-offset-2 main">
    <div class="row">
        <ol class="breadcrumb">
            <li><a href="#"><span class="glyphicon glyphicon-home"></span></a></li>
            <li class="active">Master Data Rak</li>
        </ol>
    </div><!--/.row-->
```

```

<div class="row">
  <div class="col-lg-12">
    <div class="panel panel-default">
      <div class="panel-body">

        <h3>
          Master Data Rak
          <a href="<?= base_url('admin/input-data-rak'); ?>">
            <button type="button" class="btn btn-sm btn-
primary pull-right">
              Tambah Data Rak
            </button>
          </a>
        </h3>

        <hr />

        <table data-toggle="table"
          data-show-refresh="true"
          data-show-toggle="true"
          data-show-columns="true"
          data-search="true"
          data-pagination="true">

Selanjutnya Tambahkan Juga Pada Controller Admin Untuk Function dari Kategori

Controller Admin – Kategori

```
public function master_kategori()
{
    $model = new M_Kategori();

    $data = [
        'data_kategori' => $model->where('is_delete_kategori', '0')->findAll()
    ];

    echo view('Backend/Template/header', $data);
    echo view('Backend/Template/sidebar', $data);
    echo view('Backend/MasterKategori/master-data-kategori', $data);
    echo view('Backend/Template/footer', $data);
}

public function input_kategori()
{
    return view('Backend/Template/header')
        . view('Backend/Template/sidebar')
        . view('Backend/MasterKategori/input-data-kategori')
        . view('Backend/Template/footer');
}

public function simpan_kategori()
{
    $model = new M_Kategori();

    $namaKategori = $this->request->getPost('nama_kategori');

    // ambil ID terakhir
    $last = $this->db->table('tbl_kategori')
        ->select('id_kategori')
        ->orderBy('id_kategori', 'DESC')
        ->limit(1)
        ->get()
        ->getJSONArray();

    if (!$last) {
        $id = 1;
    } else {
        $id = $last['id_kategori'] + 1;
    }

    $data = [
        'id_kategori' => $id,
```

```

        'nama_kategori' => $namaKategori,
        'is_delete_kategori' => '0',
        'created_at' => date('Y-m-d H:i:s'),
        'updated_at' => date('Y-m-d H:i:s'),
    ];

    $model->insert($data);

    session()->setFlashdata('success', 'Data kategori berhasil
disimpan!');
    return redirect()->to('/admin/master-data-kategori');
}

public function edit_kategori($id)
{
    $model = new M_Kategori();

    $data = [
        'data_kategori' => $model->find($id)
    ];

    echo view('Backend/Template/header', $data);
    echo view('Backend/Template/sidebar', $data);
    echo view('Backend/MasterKategori/edit-data-kategori', $data);
    echo view('Backend/Template/footer', $data);
}

public function update_kategori()
{
    $model = new M_Kategori();

    $id = $this->request->getPost('id_kategori');

    $model->update($id, [
        'nama_kategori' => $this->request->getPost('nama_kategori'),
        'updated_at' => date('Y-m-d H:i:s')
    ]);

    session()->setFlashdata('success', 'Data kategori berhasil
diupdate!');
    return redirect()->to('/admin/master-data-kategori');
}

public function hapus_kategori($id)
{
    $model = new M_Kategori();

    // cek dipakai buku

```

```

        $cek = $this->db->table('tbl_buku')
            ->where('id_kategori', $id)
            ->where('is_delete_buku', '0')
            ->countAllResults();

        if ($cek > 0) {
            session()->setFlashdata('error', 'Kategori sedang digunakan oleh
buku!');
            return redirect()->back();
        }

        $model->delete($id);

        session()->setFlashdata('success', 'Data kategori berhasil dihapus!');
        return redirect()->to('/admin/master-data-kategori');
    }

```

Buat di Models dengan nama file M_Kategori.php

Model Kategori

```

<?php

namespace App\Models;

use CodeIgniter\Model;

class M_Kategori extends Model
{
    protected $table = 'tbl_kategori';
    protected $primaryKey = 'id_kategori';

    protected $allowedFields = [
        'id_kategori',
        'nama_kategori',
        'is_delete_kategori',
        'created_at',
        'updated_at'
    ];

    public function getDataKategori()
    {
        return $this->findAll();
    }
}

```

Sama dalam viewsnya buat folder MasterKategori, nanti di dalamnya ada beberapa file diantaranya master-data-kategori.php, input-data-kategori.php, dan edit-data-kategori.php.

Views MasterKategori

master-data-kategori.php

```
<div class="col-sm-9 col-sm-offset-3 col-lg-10 col-lg-offset-2 main">
  <div class="row">
    <ol class="breadcrumb">
      <li><a href="#"><span class="glyphicon glyphicon-home"></span></a></li>
      <li class="active">Master Data Kategori</li>
    </ol>
  </div><!--/.row-->

  <div class="row">
    <div class="col-lg-12">
      <div class="panel panel-default">
        <div class="panel-body">

          <h3>
            Master Data Kategori
            <a href="{?= base_url('admin/input-data-kategori')};
?>">
              <button type="button" class="btn btn-sm btn-primary pull-right">
                Tambah Data Kategori
              </button>
            </a>
          </h3>

          <hr />

          <table data-toggle="table"
            data-show-refresh="true"
            data-show-toggle="true"
            data-show-columns="true"
            data-search="true"
            data-pagination="true">

            <thead>
              <tr>
                <th>No</th>
                <th>Nama Kategori</th>
                <th>Status Delete</th>
                <th>Created At</th>
                <th>Updated At</th>
                <th>Ops</th>
              </tr>
```

```

        </thead>

        <tbody>
            <?php $no = 1; foreach($data_kategori as $data) {
?>

                <tr>
                    <td><?= $no++; ?></td>
                    <!-- <td><?= $data['id_kategori']; ?></td> -->
                    <td><?= $data['nama_kategori']; ?></td>

                    <td>
                        <?php if($data['is_delete_kategori'] ==
0){ ?>
                            <span class="label label-
success">Aktif</span>

                            <?php } else { ?>
                                <span class="label label-
danger">Dihapus</span>

                                <?php } ?>
                        </td>

                    <td><?= $data['created_at']; ?></td>
                    <td><?= $data['updated_at']; ?></td>

                    <td>
                        <a href="<?= base_url('admin/edit-data-
kategori/' . $data['id_kategori']); ?>">
                            <button class="btn btn-sm btn-
success">Edit</button>

                        </a>

                        <a href="<?= base_url('admin/hapus-data-
kategori/' . $data['id_kategori']); ?>"
                            class="btn btn-sm btn-danger"
                            onclick="return confirm('Yakin hapus
data ini?')">
                            Hapus
                        </a>
                    </td>
                </tr>
            <?php } ?>
        </tbody>

    </table>

Buat juga pada Models dengan nama file M_Buku.php

Model Buku

```

<?php

namespace App\Models;

use CodeIgniter\Model;

class M_Buku extends Model
{
    protected $table = 'tbl_buku';

    // Get Data Buku
    public function getDataBuku($where = false)

```

```

{
    $builder = $this->db->table($this->table);
    $builder->select('*');

    if ($where !== false) {
        $builder->where($where);
    }

    $builder->orderBy('judul_buku', 'ASC');

    return $builder->get();
}

// Get Data Buku dengan Join
public function getDataBukuJoin($where = false)
{
    $builder = $this->db->table($this->table);
    $builder->select('tbl_buku.*, tbl_kategori.nama_kategori,
tbl_rak.nama_rak');

    $builder->join('tbl_kategori', 'tbl_kategori.id_kategori =
tbl_buku.id_kategori', 'LEFT');
    $builder->join('tbl_rak', 'tbl_rak.id_rak = tbl_buku.id_rak', 'LEFT');

    if ($where !== false) {
        $builder->where($where);
    }

    $builder->orderBy('tbl_buku.judul_buku', 'ASC');

    return $builder->get();
}

public function saveDataBuku($data)
{
    return $this->db->table($this->table)->insert($data);
}

public function updateDataBuku($data, $where)
{
    return $this->db->table($this->table)
        ->where($where)
        ->update($data);
}

public function autoNumber()

```

```
{
    return $this->db->table($this->table)
        ->select('id_buku')
        ->orderBy('id_buku', 'DESC')
        ->limit(1)
        ->get();
}
```

Selanjutnya dalam viewsnya buat folder lagi dengan nama MasterBuku, nanti di dalamnya ada beberapa file diantaranya master-data-buku.php, input-buku.php, dan edit-data-buku.php.

Views MasterBuku

master-data-buku.php

```
<div class="col-sm-9 col-sm-offset-3 col-lg-10 col-lg-offset-2 main">
  <div class="row">
